

Thanks for purchasing the pen stand. You are supporting an Australian owned business supporting local families and communities. This is an Australian made and design product. It was designed, drawn and the MDF cut on the premises at Timberbits in Villawood NSW.

Parts List

Contained within the package is 1 x Top Shelf, 1 x Base 3mm, 1 x Base 6mm, 1 x Back, and 4 x Brace

Assembly

As a woodworker, it is always good practice to dry assemble the product before you glue the pieces together.

We recommend that you use PVA glue over CA and other glues. If you choose to paint the parts before you glue the pieces together, please take into consideration that it may affect the size of the openings and may result in the pieces not fitting together correctly.

1. Insert the 4 x "Spine" onto the "Back".
2. Insert the "Back and Spine" unit onto the "Base 6mm". The "Brace" will protrude from the "Base 6mm" by 3mm (the "Base 3mm" will connect to make the base flush)
3. Insert the "Top Shelf" onto the unit.
4. Insert the "Base 3mm" onto the bottom of the pen stand to complete the pen stand.
